

## Renesas Electronics RA21L Group Matching Data Details

### ◆ Evaluation items and evaluation data of oscillation circuit characteristics

#### • Circuit Diagram

#### Evaluation item

| No | Item                  | Symbol | Recommended conditions                                                  |
|----|-----------------------|--------|-------------------------------------------------------------------------|
| 1  | Negative resistance   | RL     | The value shall be at least 5 times the product R1 specification value. |
| 2  | Oscillation margin    | M      |                                                                         |
| 3  | Drive Level           | D.L    | Must be within product specifications.                                  |
| 4  | Oscillation rise time | Ts     | Reference data                                                          |

To ensure safe use by our customers,

We recommend an oscillation margin of 5 times or more.

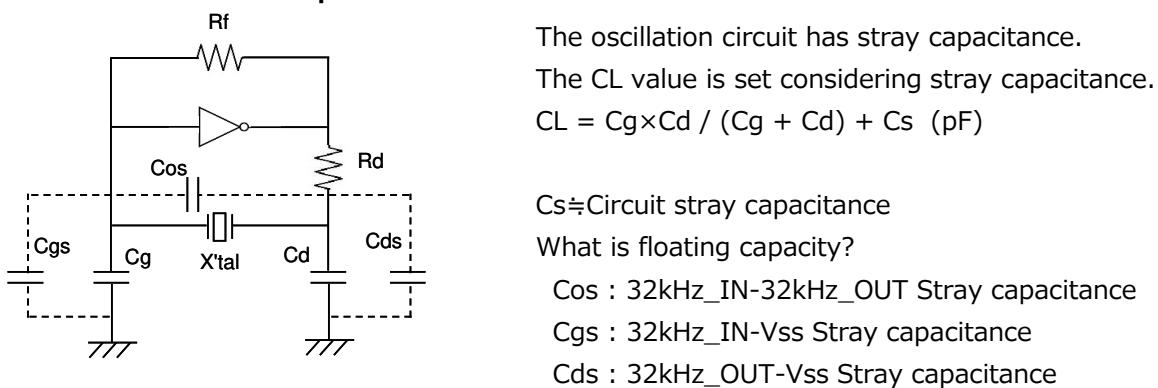

#### • Product and recommended circuit constants

| Oscillation mode | 32kHz Crystal unit |             |         | External element |         |         | Oscillation characteristics |           |           |          | Supply Voltage (V) |
|------------------|--------------------|-------------|---------|------------------|---------|---------|-----------------------------|-----------|-----------|----------|--------------------|

Load capacitances (CL) other than those listed above, automotive products (SC-32A, SC-20A), low-profile products (SC-20T), and other products are also available.  
Please contact us for details.

#### ◆About circuit load capacitance

The oscillation circuit has stray capacitance.

The CL value is set considering stray capacitance.

$$CL = C_g \times C_d / (C_g + C_d) + C_s \text{ (pF)}$$

$C_s$ =Circuit stray capacitance

What is floating capacity?

$Cos$  : 32kHz\_IN-32kHz\_OUT Stray capacitance

$Cgs$  : 32kHz\_IN-Vss Stray capacitance

$Cds$  : 32kHz\_OUT-Vss Stray capacitance

:

#### ◆Circuit board design considerations

Place the crystal unit, capacitors, and resistors as close to the Chip as possible to shorten the wiring.

To prevent interference with other signal lines, do not place other signal lines in the area where the crystal unit is mounted (underside).

The oscillation circuit design is described on our website.

In addition, please use our circuit matching service. For details, please contact our sales representatives or visit our website.

#### ◆Caution

The above evaluation results are reference values evaluated on specific samples and "IC manufacturer's evaluation board",

They are subject to change depending on the customer's board design.

Please note that the capacitance values and characteristics of external elements may vary depending on differences in stray capacitance and other factors in actual circuit boards.
